November 17, 2010, Havertown, PA, Integrated Modular Systems, Inc.(IMSI) (<http://imsimed.com/>) is pleased to announce its browser based image viewing product imsiIntegratedImage for managed access to physician portals, EMR's, and image management systems.

Any vendor's patient data management system can connect with the imsiIntegratedImage thin-client browser viewer to display the appropriate images with access control provided by the vendor's system, thereby eliminating any additional logins. Images and patient information, including requisitions, are displayed side-by-side. The viewer is used for both diagnostic and physician review. The product is currently installed in combination with several third party RIS, HIS and PACS systems in the Northeast and Midwest US.

The imsiVirtualRequisition gives the radiologist concurrent access to the patient's imaging history including previous requisitions and results. When used for reporting, both voice recognition and transcription are supported.

imsiIntegratedImage is a component of the complete integrated RIS/PACS product suite that is available from IMSI, which includes:

- IDOM RIS-X2
- imsi PACS
- imsi Integrator, the HL7 and DICOM Router
- imsi Voice-Interactive, the integrated digital dictation system
- imsi Integrated-Image

- imsi Virtual Requisition
- imsi VIEW, the workstation diagnostic viewer.

The product is offered in both an standalone onsite and a hosted configuration for providers ranging from urgent care centers to hospitals. ARRA stimulus funds have been made available to providers that utilize systems such as the IMSI products that support information sharing and interconnection through interoperability and vendor neutrality in patient care environments with DICOM and HL7 standardization, and FDA certification.

About Integrated Modular Systems, Inc., (IMSI)

IMSI is based in Philadelphia, PA metro area, and has dealers and support offices across the US. For over 30 years IMSI has been a leading integrator, engineering, installing, customizing and supporting healthcare technology solutions to meet the individual needs of healthcare networks, hospitals, and diagnostic imaging centers. With expertise in web-based products, HL7, and DICOM conformance, IMSI offers a continuum of RIS, PACS and teleradiology products and services. IMSI works with corporate partners in the industry to design and bring to market the most technologically advanced solutions.
